Case Study - June 2017

Industro-Foam Acoustic Treatment

Client: Bean Tree Café (Malmesbury Super Spar)

Location: Malmesbury, Western Cape

History: The client experienced extreme reverberation and echo inside their restaurant. Noise levels were especially bad when it was full. When the coffee machines were in use the noise was very unpleasant. Management approached Genesis Acoustics for help as they had experienced several complaints from patrons.

The Solution: The exposed ceiling was treated using acoustic Industro-Foam panels fixed directly to the ceiling. Not only did this improve the acoustics within the space, but it added a unique feature look and aesthetically pleasing finish.

The solution was achieved using the following products:

- 56 of 50mm thick, white Industro-Foam flat panels

Owner Albie Coetzee's comments:

"The sound in the Café is much better than before. We are very happy with the treatment done and the workmanship by Flip and his installation team is nicely done and very neat. Positive all round! I have passed on the feedback to Spar Head Office as they are looking to roll this out at other venues around the country that are experiencing similar echo and reverberation issues. It looks great too. Thank you for a job well done!"
