

Specification Sheet

Thermal Block

Thermal Insulation

Thermal Block is a self adhesive mat, designed to face the heat source directly to reflect radiant heat and dissipate convectional heat up to 800 degrees f.

This composite heat shield has 3 layers of heat rejecting material for the ultimate in automotive thermal insulation.

Apply on the engine side of the firewall, or under the car, above the exhaust for the ultimate in pre-cabin heat treatment.

Noise Reduction Uses

By nature, anything placed between the source of the noise, and the passengers, will, to some degree, reduce noise. Because this product has a organic fibrous core, it will reduce some airborne sound waves. When placed on the engine side of the firewall, not only will it kill a ton of heat, but it will also reduce some of the engine noise that usually penetrates the vehicles cabin.

For best acoustical results using this product, first apply a layer of our Damplifier Pro vibration mat, on the engine side of the firewall, and then apply this product on top of it to keep the heat out.

Mobile Audio

To a degree this product can help increase the perceived output of your audio system because it helps reduce engine noise. The less engine noise you hear, the more music you hear.

Specifications

- Sheets Size = 610mm x 914mm (0.56 square meters)
- Thickness = 6,3mm
- Sheet Weight = 0.45kg
